

Check for Mistakes in this Word Problem: target-leap

Directions: Write a function which takes in the target's x-coordinate and makes a player leap by returning an x-coordinate that is double the original x-coordinate.

Contract and Purpose Statement

Every contract has three parts...

; target-leap : number → number
function name domain range

; Takes the x-coordinate and returns a new one, multiplied by 2

what does the function do?

Examples

Write some examples, then circle and label what changes...

(EXAMPLE(target-leap 100) (200))
function name input(s) what the function produces

(EXAMPLE(target-leap 40) (200))
function name input(s) what the function produces

Definition

Write the definition, given variable names to all your input values...

(define(leap x-coor)
function name variables

(* x 5)
what the function does with those variables
