

Check for Mistakes in this Word Problem: late-to-class?

Directions: You will be late to class if you have to walk more than 25 pixels to get there. Write a function that takes in your x-coordinate and y-coordinate and the x-coordinate and y-coordinate of the classroom and returns true if you will be late to class and false if you will be on time.

Contract and Purpose Statement □

Every contract has three parts...

The diagram illustrates a function signature for `late-to-class?`. It is structured as follows:

- Function Name:** `late-to-class?`
- Domain:** Four `number` types, representing the input parameters.
- Range:** A `boolean` type, representing the output.
- Annotation:** A comment below the domain states: "Takes the coordinates of my location and a classroom and returns true".

Examples □

Write some examples, then circle and label what changes...

(EXAMPLE ((late-to-class?)	(> 25 (distance 40 55 65 80)))
<hr/>	<hr/>	<hr/>
<i>function name</i>	<i>input(s)</i>	<i>what the function produces</i>
(EXAMPLE ((late-to-class?)	(< 25 (distance 40 55 65 80)))
<hr/>	<hr/>	<hr/>
<i>function name</i>	<i>input(s)</i>	<i>what the function produces</i>

Definition □

Write the definition, given variable names to all your input values...

```
(define( late-to-class? student-x student-y school-x school-y )
  ( < 25 (distance student-x student-y school-x school-y)))
```
